Outline

- 1 Prerequisites
- 2 Getting Started
- 3 Starting a Project
- 4 Tracking Changes
- 5 CLAUDE.md Template

Prerequisites at Argonne

Laptop running linux or MacOS, **or access to our compute nodes**

- 1 ssh keys to access ANL accounts: <https://help.cels.anl.gov/?s=ssh>
- 2 Create file ~/.ssh/config replacing YourName with your userID:

```
Host *.cels.anl.gov !logins.cels.anl.gov
    ProxyJump YourName@logins.cels.anl.gov
Host login-gce
    User YourName
    Hostname logins.cels.anl.gov
    ControlMaster auto
    ControlPersist yes
    LogLevel FATAL
Host homes-gce
    User YourName
    Hostname homes.cels.anl.gov
    ProxyCommand ssh login-gce -q -W %h:%p
    ForwardX11 yes
```

- 3 DUO MFA set up for using ssh keys, <https://help.cels.anl.gov/?s=duo+mfa>

Getting Started with ClaudeCode

- 1 Go to <https://claude.com/product/claude-code>
- 2 Install: `curl -fsSL https://claude.ai/install.sh` `bash`—
- 3 Copy/paste the line generated by curl to update your path
- 4 Edit nano `~/.claude/settings.json` by adding

```
{
  "env": {
    "ANTHROPIC_API_KEY": "ANL-username",
    "ANTHROPIC_BASE_URL": "https://apps-dev.inside.anl.gov/argoapi",
    "CLAUDE_CODE_SKIP_ANTHROPIC_AUTH": "1"
  },
  "model": "sonnet [1m]"
}
```

You'r ready to use ClaudeCode! Questions? Slack: #ai-help-no-bad-questions

Starting a Project with Claude

Start a CLI session by typing:

```
claude
```

Useful commands inside ClaudeCode:

/init	Read directory & create CLAUDE.md
/plan	Enter planning mode
/model	Switch to a different model
/exit	End the session

Using Files to Track Changes

Three files to track each session:

- MEMORY.md $\Rightarrow$ log of changes
- plans/ $\Rightarrow$ plans created by /plan
- STATUS.md $\Rightarrow$ current project status

Updated at end of each session

$\Rightarrow$ requirement added to CLAUDE.md

At the start of each session, read:

- 1 CLAUDE.md, README.md
- 2 MEMORY.md, STATUS.md
- 3 Any $\text{\LaTeX}$ files describing the project

Optionally update CLAUDE.md:

```
/init
```

Useful Addition to CLAUDE.md

Add the following to the **start** of your CLAUDE.md file:

```
## REQUIRED: Session Protocol

Mandatory rules must be followed in every session without exception.

### Session start -- read these files before doing anything else

1. 'CLAUDE.md' (this file)
2. 'MEMORY.md' -- log of prior session changes
3. 'STATUS.md' -- current project status

### Session end -- before exiting, always do all three steps

1. **Update 'MEMORY.md'** -- append a dated entry summarising this session.
2. **Replace 'STATUS.md'** -- detailed capture of current state of project.
3. **Ask the user** whether a new plan file should be written to 'plans/'.
```
